Although there's no support for a help manual, you can decode the program's features on your own, as they are highly intuitive. Post new messages Twitcher offers you the possibility to view all posts directly in the main window. When it comes to defining a new message you can write the text directly in the main window or paste it from the clipboard. A character limit is revealed in real time as soon as you start typing the text. The application helps you insert links which can be shortened using several services (e.g. bitly, 9.gp) directly from the primary panel, embed a picture link into your post, as well as shrink your status text. You can set up multiple accounts and enable the preferred one, apply filters in order to hide tweets that you do not want to see on your account, check out message replies, access private and sent messages, refresh the information, as well sort tweets by date. Bottom line Twitcher doesn't come with support for advanced features and tons of configuration settings, as it provides just basic options for accessing your Twitter account from your desktop. On the downside, it hasn't been updated for a long time so you can make use of its capabilities especially if you are the owner of an old operating system, such as Windows 2K, XP, Vista or 7.
