YourMechanics technicians bring the dealership to you by performing this job at your home or office 7-days a week between 7AM-9PM. We currently cover over 2,000 cities and have 100k+ 5-star reviews... [LEARN MORE](#) There are two things that should be noticed when you buy a second-hand engine from an E39 BMW dealer:1) There will be a service manual in the glove

box of the car that will tell you the engine code of the engine you are purchasing, and what the service is recommended²) The engine number is going to start with E3) The engine will be most likely not be tuned for performance⁴) The car will be able to hit the limiter without having to take off the accelerator to see if it gets past it

Note: I've been told by a couple of people that they've paid 3-4k USD to have their car \"tuned\" for performance and they get a measly 0-40 acceleration time of 7.2 seconds. I will put up a post that you can read or better, if you're so inclined, contact me directly and we will compare stories. I have had people contact me wanting to know if there is something they can do to optimize the stock motor to get it above the limiter. Well, as I've said before, a single piece of aftermarket stuff is not going to turn your car into an Z4 and get it to the limiter. The only way to get an engine past the limiter is by putting an aftermarket ECU in it, which can cost \$12,000-\$20,000 USD. If you have a local gentleman that is well-versed on BMW's and ECUs, he can install this software for you for a large discount, so you can easily get it \"above\" the limiter. Most local repairers won't touch the custom code installation in the United States (and possibly Canada, too), but they'll happily install the stock ECU. Please note that the stock ECU in every engine is different. Some BMWs will run slightly better with the stock ECU, while others might run worse. It's hard to know which ECU will work in which engine, which is why most guys who sell the Porsche engine in the U.S. will install the stock ECU, but that's their call. If anyone knows of anyone in the United States that is willing and able to install this custom code, please post here on the forum, so everyone will know.

In regards to troubleshooting windows, it is usually a good idea to open the compaq panel and diagnose the problem. This is something that you can do at home without any specialized equipment. Anyway, it is just a simple process and you would be back to using windows in no time. All of the steps are summarized below. 1. Turn off your computer. 2. Press the \" start\" key and then press and hold the \" \" key. It should bring up a startup menu. 3. Select \" \". 4. Select \" \" again and it should bring up the command prompt (\"cmd.exe\") The main thing to consider when storing a convertible (as compared to other cars) is of course the soft top. The most important part of storing a convertible is to put the top up. Even in a garage, snow isnt the only element youre protecting against in the winter months. Furry friends are looking for a warm home, and your easy-entry convertible is an inviting option. In addition to closing it up soundly, cover the tailpipe and consider investing in a good quality cover. Never use a tarp, which can trap moisture and lead to mold and rust. The first step is to download the genuine BMW-ECU (the source of the software you will program). This is the most crucial step and the one that most people forget about. This was my own mistake. You don't want to get the \"fake\" or \"fraud\" version. You want to use a real one from BMW. It will include software with it. It should cost around \$50.00, but again, make sure that it is genuine. I purchased mine from bmwautotuning.com . It will work if it is genuine. You can also download the files from bmw-ecu.com . This can be risky depending on where you live. 5ec8ef588b
